Portfolio Website: <https://alok4127.github.io/portfolio-website/> | Location: Chennai, India

PROFESSIONAL SUMMARY

Computer Science undergraduate with hands-on full-stack development experience across React, TypeScript, and Java, building REST APIs, relational database schemas in MySQL, and component-based frontend architecture. Completed the JPMorgan Chase Software Engineering Job Simulation, working with Kafka, H2 databases, and REST API controller design. Strong foundation in Data Structures, Algorithms, and Database Management Systems, with a track record of shipping layered, maintainable applications from schema design through UI. Seeking a Software Engineer, Full Stack Developer, or SDE Intern role to contribute to production-quality software as part of an engineering team.

EDUCATION

SRM Institute of Science and Technology

Expected Graduation: Jun 2028

B.Tech – Computer Science and Engineering (Core) | Chennai, India

Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks, Operating Systems

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL, C

Frontend: React, Vite, Tailwind CSS, Responsive Web Design, Component-Based Architecture

Application Development: Java Swing, REST API Design, GUI Development

Databases: MySQL, JDBC, Relational Schema Design, Query Optimization

Developer Tools: VS Code, IntelliJ IDEA, Git, npm

Version Control: GitHub

Build Tools: Apache Maven, Dependency Management

Core Computer Science: Object-Oriented Programming, Data Structures and Algorithms, Database Management Systems, Software Development Life Cycle

Additional Exposure (via JPMorgan Chase Job Simulation): Apache Kafka, H2 Database, REST API Controller Design

PROFESSIONAL EXPERIENCE

IncodeVision Technologies — Full Stack Development Intern

Jun 1 – Jun 30, 2026

- Architected a responsive single-page portfolio application in React, TypeScript, and Tailwind CSS, decomposing the interface into four modular components — Projects, Skills, Education, and Contact — to enforce separation of concerns and long-term maintainability.
- Built fully responsive layouts across desktop and mobile viewports using Tailwind CSS utility classes exclusively, eliminating dependency on external CSS frameworks.
- Developed a Notes Management web application in React supporting full CRUD workflows, browser-based persistence, and real-time search for fast retrieval across note sets.
- Enforced data contracts between components using TypeScript interfaces and static typing, catching type mismatches at compile time and improving development velocity.
- Maintained structured Git and GitHub workflows across both projects, including feature branching and organized commit history, to support collaborative, professional development practices.

SpazorLabs — Business Development Intern

Jun 2026 – Aug 2026

- Conducted targeted B2B prospect research across LinkedIn and industry directories, identifying and qualifying leads across three stakeholder segments: startup founders, engineering leaders, and talent acquisition professionals.
- Executed structured outreach campaigns with segment-tailored messaging, maintaining a consistent follow-up cadence to grow the active prospect pipeline.
- Analyzed competitive landscapes and high-potential industry segments to produce insights that directly informed outreach prioritization and go-to-market strategy.
- Maintained CRM records tracking prospect status, engagement history, and follow-up actions across all pipeline stages, keeping data accurate and visible for the full team.

- Collaborated with founders and hiring leaders to align outreach strategy with business objectives, strengthening cross-functional communication and stakeholder management skills.

PROJECTS

RentoMoto — Two-Wheeler Rental Platform

2025

Technologies: Java, Java Swing, MySQL, JDBC, Apache Maven

GitHub: [Add Repository Link]

A full-stack desktop rental management application structured with a layered architecture that separates the GUI, business logic, and data-access layers to keep the codebase maintainable as features grow.

- Engineered an hourly billing module that calculates rental charges dynamically from exact pickup and return timestamps, isolating billing logic from the UI layer through object-oriented design.
- Modeled a normalized relational schema in MySQL and integrated it via JDBC to drive a real-time vehicle inventory system tracking three fleet states (available, rented, under maintenance), with state-transition logic that prevents double-booking conflicts.
- Built role-based access control with distinct customer and admin dashboards — customers view booking history and active rentals, while admins manage fleet records, configure pricing, and generate daily revenue summaries.
- Implemented input validation and structured exception handling across all user-facing forms, covering timestamp validation, negative-value prevention, and context-aware error messaging for edge cases.
- Packaged the application as a distributable executable JAR using Apache Maven, managing dependency resolution and the full build lifecycle.

Student Registration System

2025

Technologies: Java, Java Swing, MySQL, JDBC, Apache Maven

GitHub: [Add Repository Link]

A standalone desktop application for managing student records, built around a normalized relational schema and a dedicated validation layer to ensure data integrity across all operations.

- Built full CRUD workflows (create, view, update, delete) for student records backed by a MySQL schema accessed via JDBC, with structured exception handling to gracefully manage failure paths.
- Implemented validation logic for phone numbers and email addresses, including duplicate-entry detection and context-aware dialog messaging (success, error, duplicate) to guide each data operation.
- Structured the codebase into a layered architecture with separate GUI, database-access, and validation layers, applying object-oriented design principles to improve readability and long-term maintainability.

CERTIFICATIONS AND COURSES

- JPMorgan Chase & Co. — Software Engineering Job Simulation (Forage), 2026

Completed practical tasks in Project Setup, Kafka Integration, H2 Integration, REST API Integration, and REST API Controller development

- Commonwealth Bank — Introduction to Cybersecurity Job Simulation (Forage), 2026

Completed practical tasks in Data Analysis, Incident Response, Security Awareness, and Penetration Testing

- Deloitte Australia — Data Analytics Job Simulation (Forage), Jul 2026

Technologies: Tableau

Analyzed manufacturing telemetry data using Tableau and built an interactive dashboard to identify factory downtime and machine performance trends while applying data visualization and forensic technology concepts

- HackerRank — Java Programming Certification, 2025
- HackerRank — Problem Solving Certification, 2025
- Advanced Programming Practice (21CSC203P) — SRM Institute of Science and Technology, 2025
- Public Speaking with Canva — Coursera Project Network, Jun 2024

ACHIEVEMENTS AND ACTIVITIES

NSTSE 2022–23 — State Rank 2, All India Rank 193

2023

Unified Council — National Science Talent Search Examination

- Ranked among the top performers nationally out of hundreds of thousands of participants, demonstrating strong quantitative and logical reasoning ability across Mathematics and Physics.

Silver Award — International Olympiad Foundation (IOF)

2020

- Recognized among top performers worldwide in a competitive academic assessment covering core academic subjects.

Competitive Programming — HackerRank

- Actively solving algorithmic and data structure problems in Java, reinforcing object-oriented design and problem-solving patterns applicable to technical interviews.
